Contents

I. Introduction

I-1. Preface

I-2. Policy and structure

II. Probabilistic logic

II-1. Theory of frequentism

II-2. Judgement in frequentism

III. Probability distribution.

III-1. Relation among distribution models used in significant tests

III-2. Probability distributions

III-2-1. Frequentism and binomial distribution

III-2-2. Nature of binomial distribution

III-2-3. Poisson distribution

III-2-4. Normal distribution

III-2-5. χ^2 distribution

III-2-6. Student's t distribution

III-2-7. F distribution

III-3. Mathematical explanations

III-3-1. Taylor expansion

III-3-2. Napier's constant

III-3-3. Jacobian

III-3-4. Coordinate conversion

III-3-5. Multiple integral

IV. Significance test

IV-1. Statistical testing works

IV-2. Structure and handling of data

IV-2-1. Separation of variances

IV-2-2. Variance of sum, Variance of difference

IV-2-3. Structure of data

IV-3. Procedure of significant tests

IV-3-1. Student's t test

IV-3-2. F test

IV-3-3. Simple linear regression and correlation

IV-3-4. χ^2 test

V. Fundamental algebra (matrix calculation)

V-1. Fundamental matrix calculation

V-1-1. What is matrix
V-1-2. Basic arithmetic operations of matrix
V-1-3. Inverse matrix and identity matrix
V-1-4. Determinant
V-1-5. Surrus's rule
V-1-6. Eigenvector and eigenvalue
V-1-7. Row reduction method
V-1-8. Cofactor expansion and inverse matrix
V-1-9. Cramer's rule
V-1-10. Separation of matrix
V-2. Advanced matrix operations
V-2-1. Similarity
V-2-2. Diagonalization
V-2-3. Spectral decomposition
V-2-4. Quadratic form
V-2-5. Power method of matrix
V-2-6. Maximum and minimum
V-3. Utilization of variance and covariance matrix.
V-3-1. Variance and covariance matrix
V-3-2. Structure of variance and covariance matrix
V-3-3. Mahalanobis' distance
V-3-4. Optimization and pseudo-inverse matrix
V-3-5. Singular value decomposition
VI. Multivariable analysis
VI-1. Optimization
VI-1-1. Multiple linear regression
VI-1-2. Partial correlation analysis
VI-1-3. Linear discriminant analysis
VI-2. Structure of data
VI-2-1. Principle component analysis
VI-2-2. Multidimensional scaling method
VI-2-3. Multiple corresponding analysis (under construction)
VI-3. Latent factor
VI-3-1. Factor analysis (under construction)
